

SEEING AROUND CORNERS

Comprehensive Cyber Risk
Management Solutions

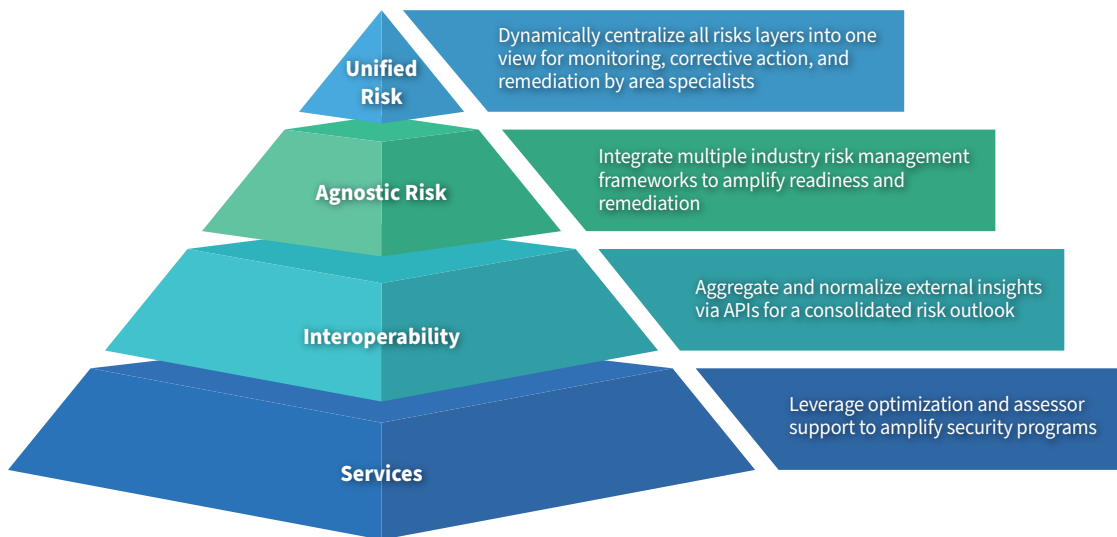

Seeing Around Corners

It's no secret that cyber threats are escalating as they become more sophisticated in the healthcare space — and so is the task of managing security risks that arise from an ever-evolving threat landscape. With the costs of cyber-attacks constantly increasing, it is essential to shore up complex, often antiquated infrastructure and security gaps across the care continuum.

Intracorp Health set out to reimage cybersecurity programs by replacing the commonly fragmented, laborious status quo of cybersecurity and compliance practices with a robust, intelligent risk management platform and services built upon four pillars:

- Unified risk register and dynamic management
- Agnostic risk frameworks/methodologies
- Interoperability through standards-based API
- Security services

Building Blocks for a Solid Cybersecurity Foundation

The lack of an integrated risk view leaves you blind to potential threats and vulnerabilities. Risk management isn't straight forward. It involves multiple levels of risk from physical, technical, administrative to third-party and, most importantly, impacts patient safety. Our powerful platform is designed for healthcare. It delivers a comprehensive approach to risk management, compliance, and data protection. Build a stronger cybersecurity program with BluePrint Protect™ Integrated Risk Management (IRM).

of lawsuits due to data breaches

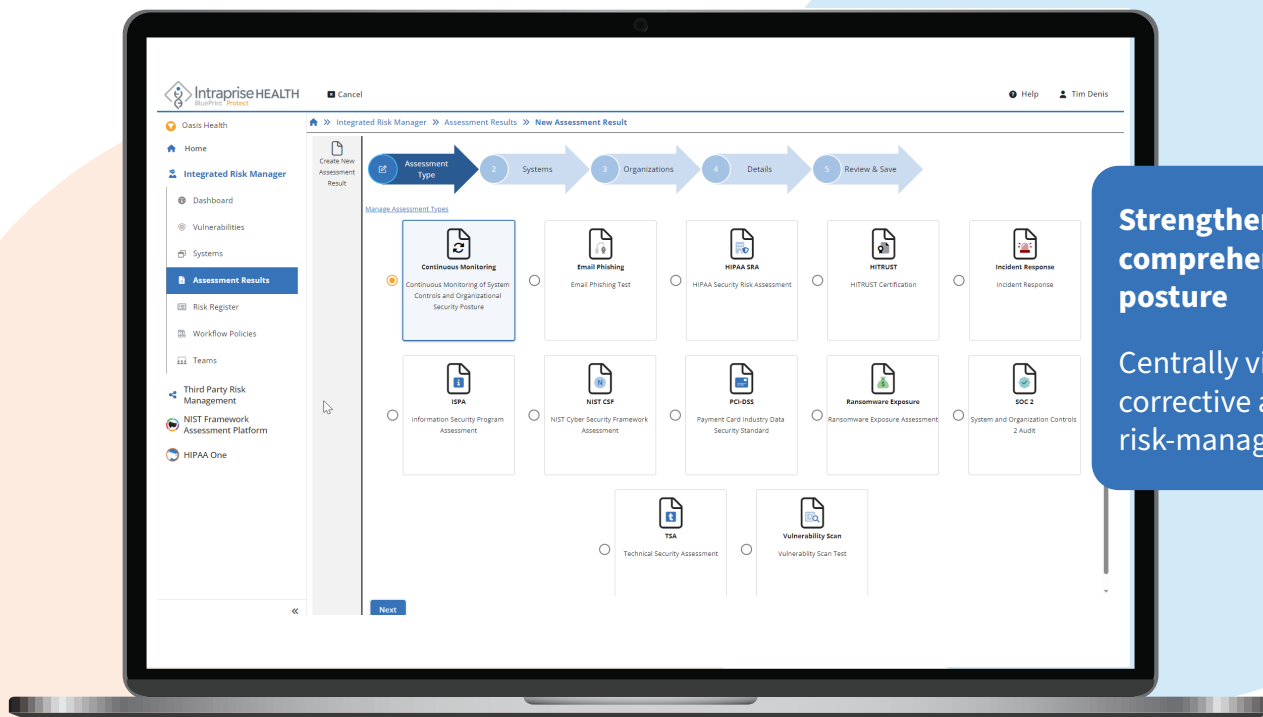

A Single, Comprehensive Risk View

The healthcare industry is subject to multiple critical regulatory and compliance frameworks, making it vital to have a risk management platform that can both ensure compliance and minimize the risk of data compromise. With the vast amount of data that healthcare organizations collect, store, and transmit, it is nearly impossible to accomplish an effective 360-degree view to manage risks effectively without an integrated risk management solution — until now.

The scalable and customizable BluePrint Protect Integrated Risk Management (IRM) platform enables healthcare organizations to comprehensively view risk across complex organizations without compromising due to limitations of time or funds — identifying, assessing, and prioritizing both internal and vendor risks, while ensuring mitigation assignments are effective. Traditional measures to audit compliance to frameworks like NIST, HITRUST, or even HIPAA paint only part of the picture. It's only with a holistic view using the power of BluePrint Protect IRM that you can then visualize, measure, audit, and act upon your organizational vulnerability profile.

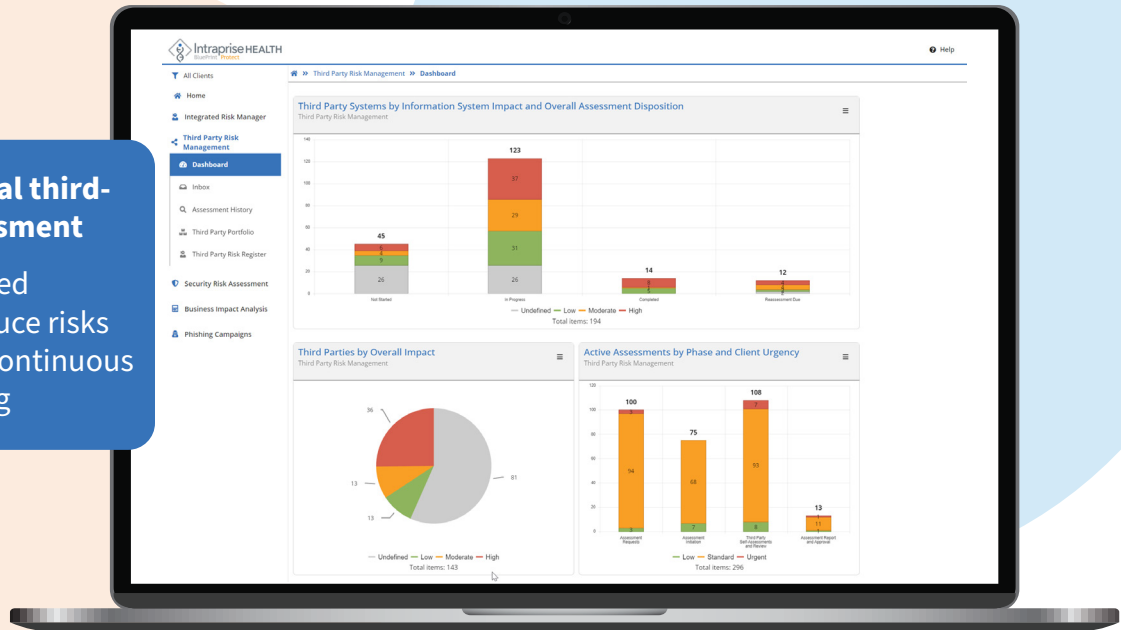

- Unified view of risk that integrates previously siloed assessments — both internal and third-party risk and compliance
- Consolidated view for more effective risk remediation
- Frictionless collaboration tools for departmental, client, and vendor teams
- Single, actionable report provides risk quantification for cyber insurance auditors and providers

Eliminate manual third-party risk assessment

Automated, guided assessments reduce risks and strengthen continuous threat monitoring

Establishing Resilience Against Third-Party Risk

Let's face it, managing third-party risk is challenging. Third party risk auditing is usually wrought with inefficiencies, manual tracking on spreadsheets and emails, and blind spots due to team bandwidth. By facilitating vendor questionnaires within the platform and integrating into an IRM view, Intracorp Health's BluePrint Protect Third Party Risk Management (TPRM) solution provides additional insights into how third-party risk affects your overall security and compliance posture — and enables you to measure and maintain every vendor risk profile, without the headache.

- Health tech, IoT and medical device vendor assessments in a single platform, mapped to industry standards to ensure adherence to compliance frameworks (HIPAA, NIST, MDS-2)
- Right-sized vendor questionnaires with real-time, online collaboration, and automated “cradle-to-grave” remediation management
- Visibility to the entire portfolio of third-party systems risk easing your audit woes and ensuring you have an accurate understanding of external risk posture
- On demand reporting to support Cyber Insurance third-party risk coverage

HIPAA Compliance Made Easy

Healthcare IT and risk leaders understand the critical nature of HIPAA, yet for many of us, Security Risk Assessments (SRAs) remain an arduous and therefore costly event. Purposefully-built to eliminate the burdens associated with SRA execution and remediation, HIPAA One™ Automated SRA Platform fortifies defenses and creates a semi-automated process to eliminate gaps in your proverbial fortress.

Healthcare's matrixed infrastructure makes it challenging to identify vulnerabilities in enterprise and individual locations. HIPAA One consolidates tracking — streamlining multi-location assessments and providing real-time reporting and analytics across every hospital, clinic, SNF, and other affiliated lines of business. Organizations can complete their SRA independently or leverage an Intracorp Health certified assessor and track historical remediation and action. Rest easy knowing that your organization is on the most efficient path to HIPAA compliance and reduced risk of compromise.

- Reflexive Question Engine allows questions to be assigned to multiple delegates to answer specific interview questions based on role (HR, IT, Security, Facilities, etc.)
- Centralizes real-time enterprise insights and reporting for more informed decision making
- Automated team collaboration and delegation
- Questioning engine helps users navigate HIPAA regulations
- Track risk using OCR audit protocols and NIST methodologies
- Robust library of policy and procedure templates and tools required to maintain compliance

Using Intracorp Health's HIPAA One software is easy and straightforward. I like the fact that it helps me stay up to date with any industry legislative changes. We feel like we finally have a good program in place that gives me the reassurance I need that I am staying up-to-date and HIPAA compliant.

HITRUST and NIST Framework Adoption Readiness

Looking for peace of mind? Whether you're a Business Associate, a healthcare organization or payer, adopting a cybersecurity framework provides additional guidance, best practices, and protection to your security program.

Managing Risk and Compliance with HITRUST

From its very beginning, Intracorp Health has been committed to becoming the leading HITRUST Assessor in the country, and in 2011, **the company became the first 100% healthcare-focused HITRUST Certified Assessor.**

For over 10 years, we have guided hundreds of healthcare organizations including tech startups, multinational companies, hospitals, health systems and insurers to achieve a successful certification.

The results? A track record of 100% successful first-time certification submissions. Over time we have honed our approach and methodology to develop industry-leading expertise on CSF adoption and certification. We work with you to determine which HITRUST CSF that best fits your organization:

- **HITRUST Essentials**, 1-Year (e1) Validated Assessment
- **HITRUST Implemented**, 1-Year (i1) Validated Assessment
- **HITRUST Risk-based**, 2-Year (r2) Validated Assessment

NIST Expertise You Can Rely On

The journey to implementing the NIST Cybersecurity Framework has never been so easy. Intracorp Health's NIST Assessment Platform aligns cybersecurity and privacy programs for hospitals, payers, and large healthcare organizations to identify and prioritize risks while amplifying your ability to respond to and recover from an attack.

Designed by NIST healthcare experts, our platform streamlines evidence collection, pinpoints gaps, and delivers on-demand recommendations and reporting on how to mature your cybersecurity program. There are three implementation pathways to choose from: Self Assessment, Facilitated Assessment, and Managed Services Assessment.

Add proven security strategies to your cybersecurity program today.

About Us

Intracorpore Health, healthcare's leading compliance and cybersecurity organization, provides holistic visualization of your compliance and security posture. Our comprehensive services, backed by automation, rapidly integrate in native environments, yielding a comprehensive view of risk – spanning adherence to compliance frameworks, cybersecurity vulnerabilities, and third-party risk. Eliminate blind spots with Intracorpore — the fifth HITRUST assessor since 2011.
